

PayBase Desktop Cheques

User-friendly system which simply Delivers Security, Efficiency and Control

Cheque systems are often labour intensive and inefficient. This combined with the jams, duplications and noise of an unreliable printer or signer can make processing the cheque run a chore. Handwriting cheques is even more inefficient and laborious. There are often gaps around the security of both these processes, with little or no audit trail.

What is PayBase Desktop Cheques?

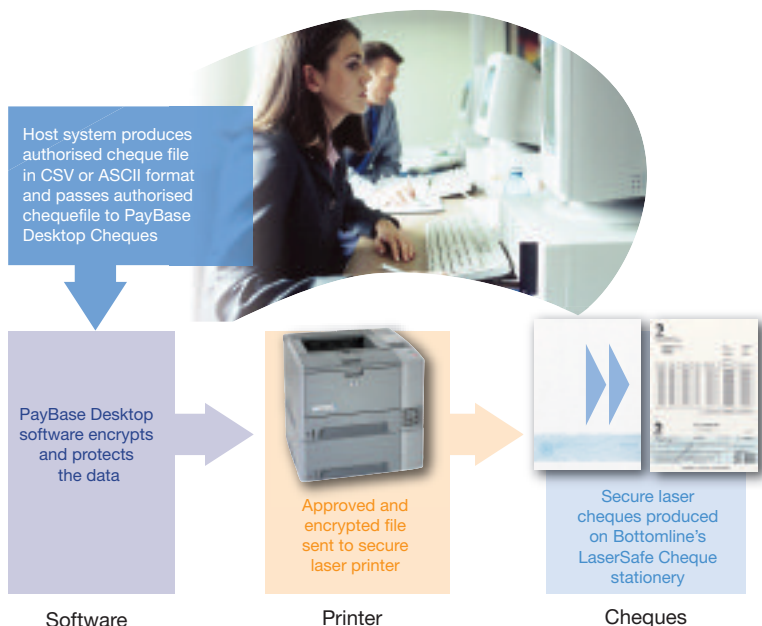

PayBase Desktop Cheques is a desktop solution designed to replace the troublesome, manual, time-intensive process often associated with printing continuous cheques or handwriting them. It is a complete end-to-end package of secure user friendly software, an approved laser printer, and multi-featured laser cheque stationery. The three components of the system work together to ensure there is no 'weak link' in your cheque printing process.

Why Choose PayBase Desktop Cheques?

PayBase Desktop Cheques provides a complete solution with the components chosen specifically to work together forming a 'best in class' system:

- PayBase software embraces the latest technologies to provide a simple, secure cheque production system. It is used by over 2000 customers worldwide.
- A printer approved by both APACS (UK trade association for payments) and PIRA (Print Industries Research Association). It boasts several security enhancements over a regular laser printer, including lockable toner tray.
- Bottomline's LaserSafe Cheque Stationery with numerous security features, and exceeds APACS 3 cheque standards. Since their design and release, a Bottomline LaserSafe cheque has never been fraudulently passed.
- Capability for making BACS payments is already built in to the system so that if you choose to start making electronic payments, you will not need to invest in a new software platform.

'End-to-End' Protection from Fraud

Fraud Update!

APACS statistics show that since the inception of chip and pin payment fraud has moved back to cheques. APACS highlighted in their last survey that during the first 6 months of 2004, attempted cheque fraud rose by 50% compared to 2003. **Don't let your cheques be a target!** PayBase Desktop Cheques provides the ultimate in cheque security.
