

Bottomline Training Overview

Administration of FormScape Business Edition

1 Day Course

Course Objective

This course is designed for the person responsible for the administration of FormScape Business Edition software. It will provide instruction for the installation, configuration, monitoring and administration of the core modules, how to move developed projects into production, and how to maintain a multi-developer environment. This course will also cover the administration of FormScape Presenter.

Course Description

This hands-on course provides an understanding of how the software is used, installed, configured, monitored and maintained without requiring in-depth knowledge of the FormScape design tools. A major focus of this course is the use of the Web interface for Administrator and Presenter. The material will explain the role and functionality of the server components, development tools and add-on modules.

Who Should Attend?

Anyone responsible for administration of a FormScape Business Edition software implementation and interested team leaders.

Required Skills and Prerequisite Courses

FormScape administrators should possess a basic understanding of TCP/IP networking and printer administration. Attendees should also have an understanding of Microsoft Windows system services, such as how to start, stop and restart a service.

Next Recommended Course(s)

Students wishing to attend this course and who are required to create new, or edit existing FormScape projects should attend the Introduction to FormScape Project Development training course. Students should also consider attending the Introduction to FormScape Presenter course if they are also required to do FormScape development that integrates with Presenter.

What Will I Learn?

- How the system components interact
- Software installation, license management and configuration
- Fundamentals and concepts of project design
- Project deployment concepts
- How to create and manage users for the deployment server
- Implementing security
- How to view and manage log files within the FormScape environment
- Presenter Web server and database configuration
- Presenter document, user and category management
- Presenter security
- FormScape system administration through hands-on exercises
