

# Bottomline Training Overview

## FormScape® Integration with Oracle/JD Edwards Software

2 Day Course

### Course Objective

This course provides instruction on how to build projects using Oracle/JD Edwards data. The student will learn about FormScape tools specifically designed to transform and present JD Edwards PDF or OSA data quickly and efficiently.

### Course Description

This hands-on course is an extension of the Introduction to FormScape Project Development course and is meant for those individuals working in an organization using Oracle/JD Edwards software. Tasks will include creating projects utilizing special tools that interpret, transform and distribute the ERP data.

### Who Should Attend?

Project developers using FormScape Business or Enterprise Edition software to process Oracle/JD Edwards data.

### Required Skills and Prerequisite Courses

Participants must first complete the Introduction to FormScape Project Development course. They must also have a basic understanding of their organization's ERP implementation. Experience using the Microsoft Windows Graphic User Interface, as well as proficiency with elementary programming concepts including conditional logic, is also needed.

### Next Recommended Course(s)

Students wishing to attend this course, and who are required to administer the system or store any output within the FormScape Presenter module, should attend the Administration of FormScape Business and Enterprise Edition, and the Introduction to FormScape Presenter Business or Enterprise Edition courses respectively. Delegates should also consider attending the Advanced FormScape Project Development course once they have gained experience using the Designer module.

### What Will I Learn?

- Differences between Oracle/JD Edwards PDF metadata and OSA data
- How to configure the host system to deliver PDF metadata and OSA data
- How to utilize the OSA functionality within a Branch file
- How to use the Report Transformer Parser and Paginator objects
- Project Development skills through multiple hands-on programming exercises
